PROGRAM DIRECTOR

Dr. Yves J. Hilpisch is founder and managing partner of The Python Quants (<http://tpq.io>), a group focusing on the use of open source technologies for financial data science, algorithmic trading and computational finance. He is the author of the books:

- Python for Finance (O'Reilly)
- Derivatives Analytics with Python (Wiley)
- Listed Volatility and Variance Derivatives (Wiley)
- He has written the financial analytics library DX Analytics (<http://dx-analytics.com>) and organizes conferences and Meetup events about Python for finance and algorithmic trading in Frankfurt, London and New York. He has given keynote speeches at technology conferences in the United States, Europe and Asia.

Top 10 Banking Analytics Solution Providers

Today's data-driven banking industry portrays a scenario where analytics is paving a productive path for banks, by offering meaningful insights on their underlying data.

Although basic reporting and descriptive analytics are prevalent in the banking sector, the need of the hour is advanced predictive and prescriptive analytics.

Sophisticated technologies—like the emerging cognitive analytics for instance—are enabling banks to make better decisions and achieve profitable growth quarter-on-quarter. At the same time, with enhanced visibility into intricate information, such as individual financial health and behavioral patterns, banks now have the upper hand in risk mitigation and fraud prevention that help them comply with mandatory regulations.

With the Blockchain gaining mainstream attraction, digital currencies such as Bitcoin and Ethereum are doing their rounds among consumers for payments and other transactions. To that end,

banks are leveraging analytics to verify these digital currencies, by verifying with an unprecedented level of confidence.

Identifying the numerous banking challenges, the constant quest to find solutions in a timely and accurate manner has reached a whole new level.

To help CIOs and CFOs make better decisions, a distinguished solution provider, a distinguished group of CFOs, VCs, analysts, and the banking industry has selected top players from the banking industry to demonstrate an ability to develop methodologies along the bank's outstanding customer service.

We present to you Banking Analytics Solution Providers 2017.

individuals to do financial and data analytics in real-time and on a highly customized basis as well as to rapidly develop new financial applications and deploy them based on weekly or even daily cycles. "We support financial institutions in introducing, training and deploying Python and a major building block in this regard is our Quant Platform," adds Hilpisch. "Our training offerings are based on more than 10 years of

experience with Python for Finance and provide a hands-on learning experience, making heavy use, for instance, also of our Quant Platform."

The company's Quant Platform makes central, standardized Python deployment an easy and efficient affair while mitigating risks and reducing maintenance costs considerably during deployment. Based on modern web technologies and deployment techniques like Docker containers, the Quant Platform provides a full-fledged suite of development tools via the web browser without the need to install any kind of open source software locally on desktop or notebook computers.

In an instance, Eurex, one of the leading derivatives exchanges, wanted to support investors, traders, market makers and quants in the understanding and trading of their listed volatility and variance products. Eurex decided to use Python for this project and The Python Quants were tasked to create the content and in particular the Python codes accompanying it. While the content itself became part of the Eurex website, all Python codes were provided to Eurex partners and other interested parties on a Eurex-labeled version of the Quant Platform for easy code access and execution. "Deploying open source technologies, like Python, is often a tedious and sometimes even a risky process, with our services and products we help our clients to make this process more efficient and mitigate risks," adds Hilpisch.

Another product of The Python Quants Group assisting organizations to model, price and risk manage complex portfolios of (multi-risk) derivatives with potentially complex correlation structures

SOLUTION PROVIDERS - 2017

The Python Quants Group Enhance Financial Analytics

Over the years, the ecosystem of scientific, numerical and data analytics packages available for Python has grown rapidly and has finally made it

possible to do financial and data analytics in real-time and on a highly customized basis as well as to rapidly develop new financial applications and deploy them based on weekly or even daily cycles. "We support financial institutions in introducing, training and deploying Python and a major building block in this regard is our Quant Platform," adds Hilpisch. "Our training offerings are based on more than 10 years of

Dr. Yves J. Hilpisch

is DX Analytics. Being an open source derivatives, portfolio and risk analytics library written exclusively in Python—it makes heavy use of the capabilities of Python and the capabilities of its numerical and data analytics libraries.

“

Our major focus has always been on the use of Python and open source technologies for financial data science, computational finance and algorithmic trading

As the Python ecosystem sees tremendous momentum, The Python Quants Group's near-term focus will be on machine and deep learning techniques, technologies emerging in algorithmic trading as well as on cryptocurrencies and blockchain. "We will improve our value proposition in particular for hedge funds and other buy side players for the days to come," concludes Hilpisch. BC

The Python Quants GmbH Bringing a new approach to financial analytics with Python

The present day banking industry is data driven. It depends on predictive and prescriptive analytics solutions to gain meaningful insights from the underlying data that paves the path for productivity and development. With the expansion of technology into trading in the recent years, algorithms are responsible for making rapid split-second trading decisions, faster than humans could make. As technologists look to bring a greater exposure of technology to banking, Python and its eco-system of powerful packages emerged as the technology platform of choice in the financial market. The Python Quants Group realized this and developed a business model around Python for Finance & Algorithmic Trading enabling organizations and individuals to do financial and data analytics in real-time and on a highly customized basis as well as to rapidly develop new financial applications and deploy them based on weekly or even daily cycles.

The company was set up to benefit from new open source technologies, the Python ecosystem in particular, as well as new financial methods

and approaches like large scale Monte Carlo simulation in finance. The Python Quants Group is active in the areas of technology, know-how & research, and services & community. It focuses on Python for Financial Data Science, Algorithmic Trading and Computational Finance and also offers consulting, development and training services in all financial capitals, e.g., Frankfurt, London, New York, Singapore. It helps its clients to use Python for Quant Finance to solve specific problems or to conduct ambitious and path-breaking projects.

Providing valuation capabilities based on Monte Carlo Simulation with DEXISION

The first product that the company launched was DEXISION, a Python- and simulation-based financial engineering and derivatives pricing platform with "Derivatives Analytics On Demand" being the tag line. It was developed keeping the market needs in view to design, manage and price complex financial derivatives. The company

SR2017 50 BEST COMPANIES TO WATCH

"Both in terms of technology and community we have build one of the biggest platforms in the Python for Finance field."

Knowing the CEO, Dr. Yves J. Hilpisch

Dr. Yves J. Hilpisch is the Founder and CEO of The Python Quants, a group focusing on the use of open source technologies for financial data science, algorithmic trading and computational finance.

Yves has a Ph.D. in Mathematical Finance and lectures on computational finance at the CQF Program, on data science at htw saar University of Applied Sciences and is the director of the first online training program leading University Certifications written the financial I organizes meetups for quantitative finance in . He has given keynote speeches in the United States,

Dr. Yves J. Hilpisch, Founder & CEO

classes and courses in Python for Finance. Its focus here lies on Financial Data Science, Algorithmic Trading and Computational Finance. In addition, the company has given customized corporate training classes for some of the biggest hedge funds and asset managers in the industry.

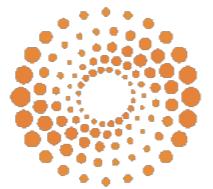

from the three books by Yves Hilpisch, namely Python for Finance, Derivatives Analytics with Python and Listed Volatility & Variance Derivatives.

Although it is a small company and located in Germany, it has global reach due to its available technologies. It uses the CRM software, Highrise HQ, to manage all relationships in an integrated manner. All sign-ups for the platform and email lists land there. Probably more than 95% of its platform users have free accounts with the company. It is the first to offer an official University Certificate in Python for Algorithmic Trading in co-operation with the htw saar University of Applied Sciences in Germany. The company has also launched a new training course "Finance with Python". This course teaches finance from basic principles and Python from the very beginning.

For more information:
<http://tpq.io>

implements what is sometimes called the global valuation of derivatives instruments.

Python arrived late in the financial industry. But since it is used now strategically by many of the biggest financial institutions in the world like Bank of America Merrill Lynch or JP Morgan, the need for professional Python education has been growing steadily. The company reacted to it by offering Python for Finance events like the For Python Quants Bootcamp in London and New York as well as by offering an integrated suite of online training

The Benchmark Case of Random Walks

“For many years, economists, statisticians, and teachers of finance have been interested in developing and testing models of stock price behavior. One important model that has evolved from this research is the theory of random walks. This theory casts serious doubt on many other methods for describing and predicting stock price behavior—methods that have considerable popularity outside the academic world.

For example, we shall see later that, if the random-walk theory is an accurate description of reality, then the various “technical” or “chartist” procedures for predicting stock prices are completely without value.”

Eugene F. Fama (1965): “Random Walks in Stock Market Prices”.

“A market is efficient with respect to an information set S if it is impossible to make economic profits by trading on the basis of information set S.”

Michael Jensen (1978): “Some Anomalous Evidence Regarding Market Efficiency”.

If a stock price follows a
(simple) random walk
(no drift & normally distributed returns),
then it rises and falls with
the same probability of 50% (“toss of a coin”).

In such a case,
the best predictor of tomorrow’s stock price
—in a least-squares sense—
is today’s stock price.

SINGULARITY RISING

“Vast increases in biological and machine intelligences will create what’s being called the Singularity—a threshold of time at which AIs that are at least as smart as humans, and/or augmented human intelligence, radically remake civilization.”

James Miller (2012): Singularity Rising. BenBella Books.

The image shows a web browser window with two tabs open. The top tab is the main Google.ai homepage, featuring the Google logo and navigation links for "Our work" and "Tools". The main content area displays a large image of a complex electronic circuit board or chip. Below this, there's a section with the heading "Google.ai" and the sub-headline "Bringing the benefits of AI to everyone". A quote from Google's mission statement is present, followed by a paragraph about AI making things easier for users. The bottom section features the TensorFlow logo and the word "TensorFlow". The second tab, titled "Cloud TPUs - Google.ai", is located below the first. It has a similar header with "Google.ai", "Our work", and "Tools". The main content area features a large image of a server rack in a data center, labeled with letters A, B, C, and D. The title "Cloud TPUs" is prominently displayed, along with the subtitle "Google's second-generation Tensor Processing Unit is coming to Cloud". A blue "SIGN UP TO LEARN MORE" button is visible. Below this, two paragraphs provide details about the new TPU technology, mentioning its performance, connection options, and compatibility with TensorFlow.

Google.ai

Our work Tools

Google.ai

Bringing the benefits of AI to everyone

Our mission is to organize the world's information in ways that are useful, and AI is enabling us to do that in increasingly powerful ways for our users, our customers, and the world.

AI makes it easier for you to do things every day – from getting traffic updates while you're driving to talking to your personal digital assistant. But it's also providing new opportunities for companies and helping transform how we work and live so that more people around the world can access it.

 TensorFlow

Cloud TPUs

Google's second-generation Tensor Processing Unit is coming to Cloud

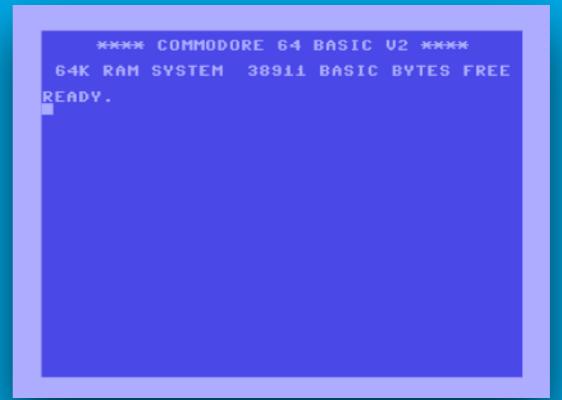

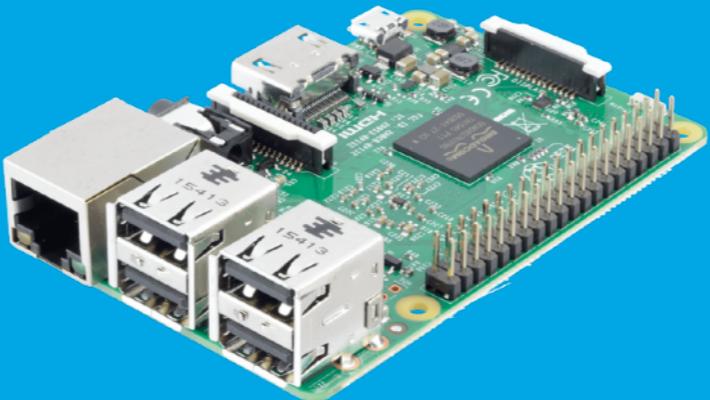

SIGN UP TO LEARN MORE

Training state-of-the-art machine learning models requires an enormous amount of computation, and researchers, engineers, and data scientists often wait weeks for results. To solve this problem, we've designed an all-new ML accelerator from scratch – a second-generation TPU, or Tensor Processing Unit – that can accelerate both training and running ML models.

Each device delivers up to 180 teraflops of floating-point performance, and these new TPUs are designed to be connected into even larger systems. A 64-TPU pod can apply up to 11.5 petaflops of computation to a single ML training task.

We're extremely excited about these new TPUs, and we want to share this technology with the world so that everyone can access their benefits. That's why we're bringing our second-generation TPUs to Google Cloud for the first time as Cloud TPUs on GCE, the Google Compute Engine. You'll be able to mix-and-match Cloud TPUs with Skylake CPUs, NVIDIA GPUs, and all of the rest of our infrastructure and services to build and optimize the perfect machine learning system for your needs. Best of all, Cloud TPUs are easy to program via TensorFlow, the most popular open-source machine learning framework.

Algorithms

Chess Singularity

Chess singularity is a threshold of time
from which on chess programs play better chess
than any human being.

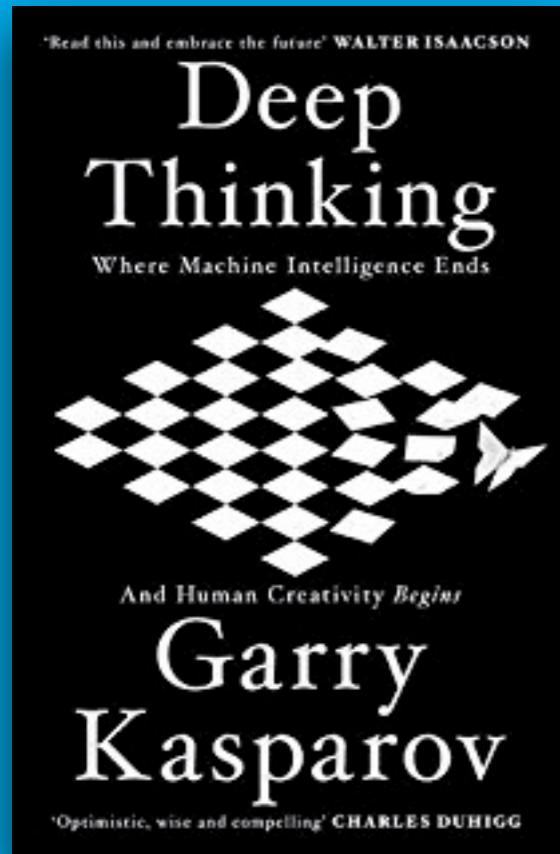

“It was a pleasant day in Hamburg in June 6, 1985, ... Each of my opponents, all thirty-two of them, was a computer. ... it didn’t come as much of a surprise, ..., when I achieved a perfect 32–0 score.”

“Twelve years later I was in New York City fighting for my chess life. Against just one machine, a \$10 million IBM supercomputer nicknamed ‘Deep Blue’.”

“Jump forward another 20 years to today, to 2017, and you can download any number of free chess apps for your phone that rival any human Grandmaster.”

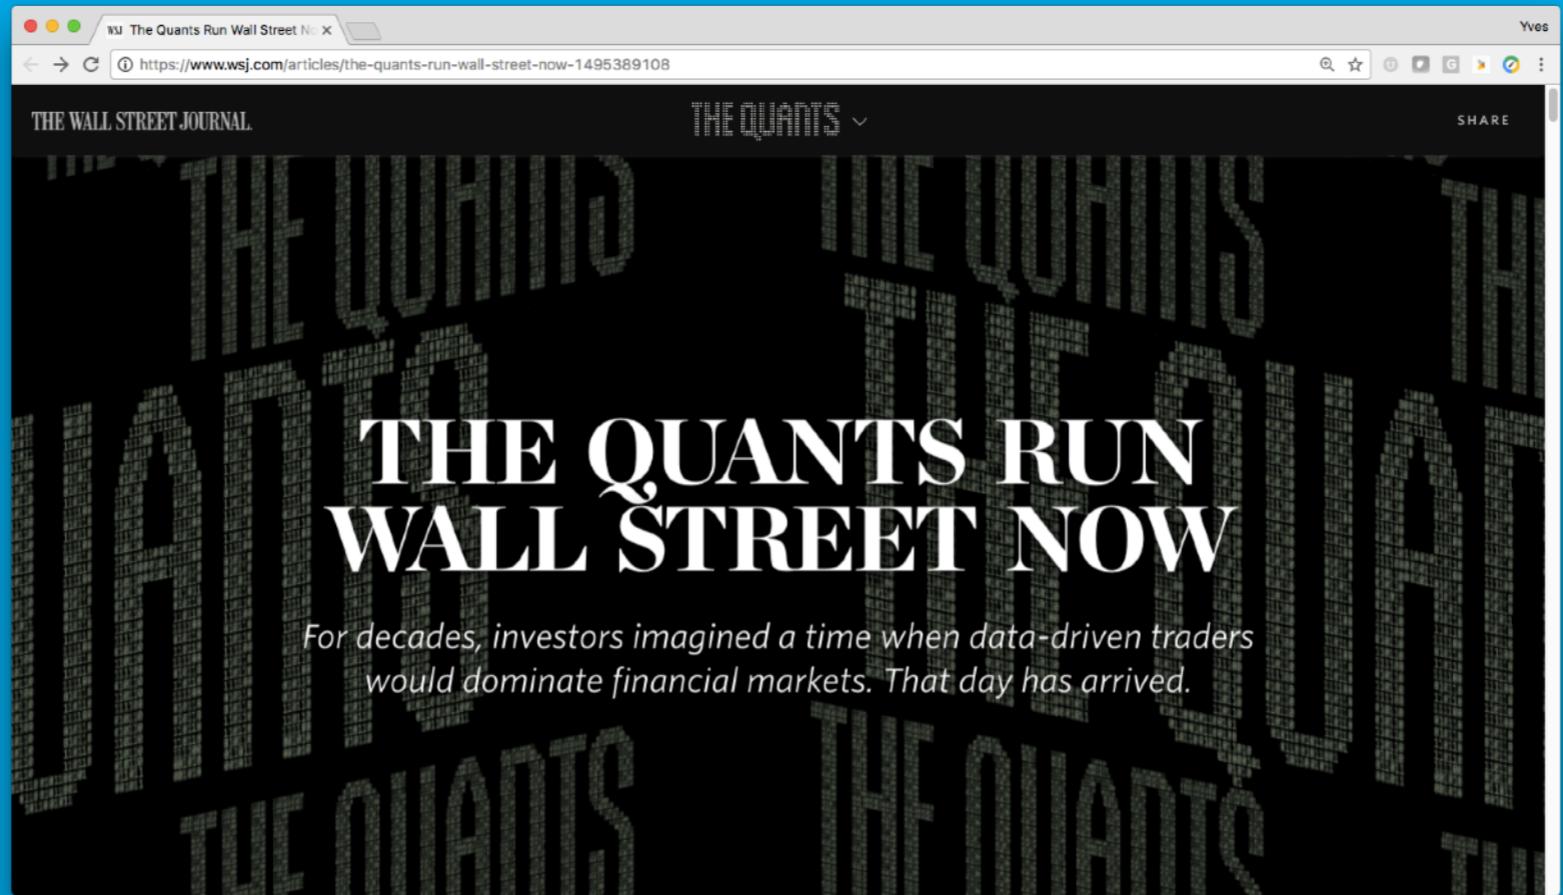

Did the human race resign
and stop playing chess?

“The world is changing too quickly to teach kids everything they need to know; they must be given the methods and means to teach themselves. This means creative problem-solving, dynamic collaboration online and off, real-time research, and the ability to modify and make their own digital tools.”

“We are fantastic at teaching our machines how to do our tasks, and we will only get better at it. The only solution is to keep creating new tasks, new missions, new industries that even we don’t know how to do ourselves. We need new frontiers and the will to explore them.”

Financial Singularity

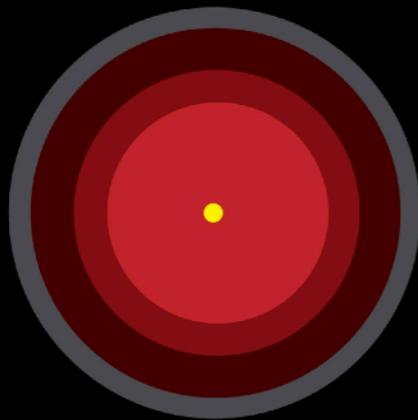

“Financial singularity is the point at which all investment decisions are made by intelligent machines rather than human agents. ... When all human fallibility is eliminated from markets, efficient markets, which have only existed so far in theory, could become a reality.”

Read more: Financial Singularity Definition | Investopedia
<http://www.investopedia.com/terms/f/financial-singularity.asp>

THE TECHNOLOGICAL SINGULARITY

MURRAY SHANAHAN

THE MIT PRESS ESSENTIAL KNOWLEDGE SERIES

“Today’s algorithmic trading programs are relatively simple and make only limited use of AI. However, this is sure to change. Artificial intelligence is beneficial in any domain where patterns have to be found in large quantities of data and effective decisions have to be taken on the basis of those patterns, especially when the decisions have to be taken rapidly.”

Murray Shanahan (2015)

Dutch Speed-Trader Turns to Currencies After Conquering ETFs

Flow Traders wants to colonize markets with its approach to trading, but its core business is coming under attack

by **Will Hadfield**

14 June 2017, 06:01 CEST

From **Bloomberg Markets**

The bottom shelf of the fridge is laden with Heineken and Corona. The Corona is on rotation, but the Heineken is a permanent fixture: This is Amsterdam. A few strides away there's a dark, well-stocked in-house pub.

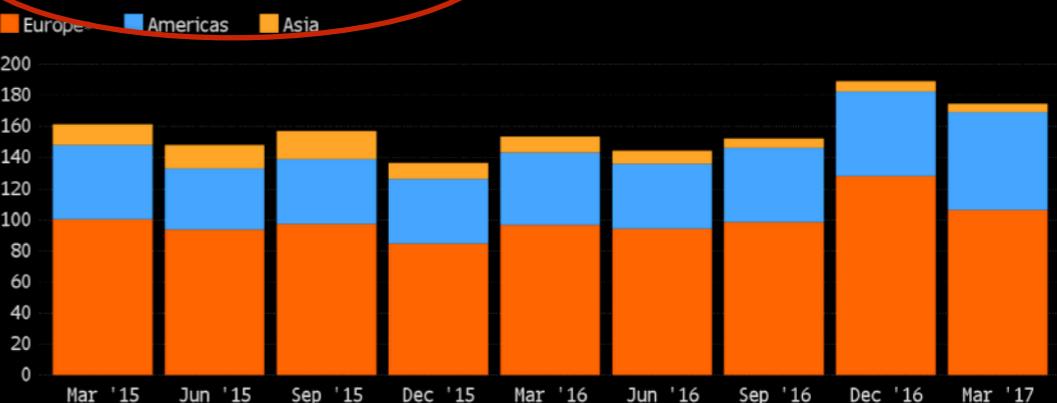

Up one flight of stairs, the atmosphere is very different. Behind a door that can only be opened with a security pass is by far the largest trading floor for exchange-traded funds in Europe. The 110 traders here, along with 30 colleagues in offices elsewhere, traded €640 billion (\$719 billion) in ETFs last year and at least that much in futures, commodities, bonds, stocks, and foreign exchange.

The trading volumes are those of a major Wall Street bank, but the refrigerator—and especially the pub, with its arcade games, pool table, and giant television—is pure startup. This isn't an investment bank; this is Flow Traders NV, one of the world's most successful algorithmic trading firms.

This year the firm will undergo its biggest transformation since it opened for business in 2004. Flow, which handles about a third of all ETF trades in Europe, is seeking to do to currency markets what it's already done to its core business. The firm's strategic calculation is that high-speed foreign exchange traders should be able to offer better prices than banks, which typically adjust their bids and offers based on their customers' creditworthiness and the amount of business they do with the lender.

34 Months Without a Loss

Flow Traders' value traded in exchange-traded funds, billion euros

Source: company

* Includes Middle East and Africa

Bloomberg

Rietberg and Dijkstra say the move into currency trading is a natural evolution of the business. That may be, but Flow also badly needs to find a new way to grow: Its shares languish below €32—the price when it went public almost two years ago. In the first three months of 2017, its profit dropped 41 percent as quiet markets reduced its ability to earn money from trading. What's more, Flow needs to adjust to a changing landscape. In some markets, the pool of income available to algo trading firms is shrinking as competition increases from established trading companies looking to expand into new asset classes.

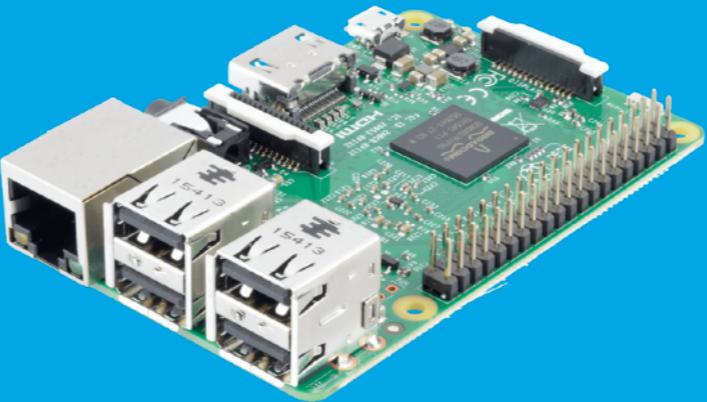

Flow is at a crossroads. Its distinctive approach to algorithmic trading could enable it to colonize other financial markets—or it could shrivel as rivals attack its core ETFs business. “Flow could be multiple times the size it currently is in 20 years,” says Joost de Rijk, an analyst who covers the company for Amsterdam-based merchant bank Kempen & Co. “But it could also be gone. I think they will reevaluate every year whether this is working. That’s the DNA of the company.”

When you make only 0.028 percent on a trade, you need to make a lot of them.

Announcing its first-quarter results in May, Flow reported that it hadn't lost money on a single trading day in the preceding 34 months. It attributes the stellar run to its use of deterministic modeling, which produces definite outcomes, not probable ones. Most of its rivals calculate prices by means of statistical, or stochastic, modeling, producing hedges that probably (but not definitely) protect them from any downside.

Las Vegas reels from worst US mass shooting

A casualty is carried from the scene after a gunman opened fire on concertgoers in Las Vegas on Sunday night. More than 58 people were killed and over 515 injured in one of the deadliest shootings in US history.

Las Vegas police said the suspected gunman, 64-year-old Stephen Paddock, fired shots from his 32nd-floor room in the Mandalay Bay Hotel and Casino into the crowd of 22,000 people attending the Route 91 Harvest festival.

In television remarks, Donald Trump, the US president, called the shooting "an act of pure evil" but made no reference to gun control. He plans to visit the city on Wednesday to meet the families of the victims and law enforcement officials.

Catalan president urges Brussels to mediate in independence clash

► Region seeks to avoid 'traumatic split' from Spain ► EU says dispute is 'internal matter'

MICHAEL STOTHARD — BARCELONA

IAN MOUNT — GIRONA

The Catalan government said it wanted to avoid a "traumatic split" from Spain and appealed to the EU to mediate with Madrid in its bid to hold back from an early declaration of independence after Sunday's regional referendum.

On Monday, the president of the independentist government, Carles Puigdemont, said that after Sunday's vote, when 90 per cent of the 2.3m ballot cast were in favour of independence, Catalonia now had the right to be free from Spain, but he hinted that this would not happen immediately.

"There is no button to push for independence, it does not exist," said Mr Puigdemont at a press conference. He called on the EU to help broker negotiations: "It's obvious we need mediation."

He added: "We don't want a traumatic break ... We want a new understanding with the Spanish state."

Breaking with its previous reticence to speak out on Catalonia, the European Commission condemned the violent clashes between police seeking to block the ballot and voters. It urged both sides to reach a political agreement.

As Moreno Rayo, Spain's prime minister, met other EU leaders, his government insisted that while the national police reinforce what it deployed to the region over the weekend to thwart the poll, forcibly in many instances.

The Catalan leader has still left the door open to a unilateral declaration of independence unless talks with Madrid can start.

Scientists who unwind the workings of human body clock win Nobel Prize

CLIVE COOKSON — SCIENCE EDITOR

Brussels calls for battery development consortium

Report — PAGE 4

Three Americans scientists have won the Nobel medicine prize for discovering the molecular workings of the "body clock" in humans and animals that synchronise with the Earth's cycle through night and day.

According to the citation for the \$700,000 prize, the researchers "were able to peek inside our biological clock and elucidate its inner workings. Their discoveries explain how plants, animals and humans adapt their biological rhythm so that it is synchronised with the Earth's revolutions".

Carlos Espinosa de los Monteros, director of the Karolinska Institute in Stockholm, said: "The discovery of the importance of sleep hygiene and the importance of really making certain we allow ourselves to go to bed at an hour that's suitable,"

from insects to mammals. Plants too have a similar timing system.

Thomas Perlmann, secretary of the Nobel Assembly, said he reached Professors Kohsaka by phone shortly before the announcement was made public in Stockholm. "It was a surprise," he said.

For the 1980s and 1990s, which saw a revolution in molecular genetics, circadian biology has developed into a vast and highly dynamic research field, with important implications for our health and wellbeing."

Bloomberg Professional October 4, 2017

Development and deployment of artificial intelligence (AI) in financial services has accelerated. In particular, quantitative funds are increasingly applying programming and advanced statistical methods to generate alpha and automate trading strategies. Despite the hype and frequent headlines extolling the virtues

exponential forces at work:

- technology improvements
- capital accumulation
- talent accumulation
